Projects Summary

Online Shopping Site

This website shows the different categories of the product, where user can check the products and add to cart. However to buy or open the cart user have to login first.
- Technologies Used: JavaScript, Bootstrap, CSS3 and HTML5
- Role: Design all the pages and the logic part of search products and add to cart.
  Project link GitHub: [Online Shopping](#)

Activity Tracker

It is about tracking the daily routine work. To add the new activity user have to login first and user can also create a new account. Then user can add the activities with different categories (cooking, playing, etc.)
- Technologies Used: PHP, CSS3, Bootstrap, MySQL
- Role: Design and create login and sign-up pages and the whole category part.
- Project link GitHub: [Activity Tracker](#)

Tic Tac Toe Game

It's a small project where we make a Tic Tac Toe game and keep a record of a winner for example X or Y.
- Technologies Used: Java, eclipse.
- Role: Create 3*3 and 4*4 grid, save the information about winner and change the colour of grid when player wins the game.
- Project link GitHub: [Tic Tac Toe](#)

Connect Youth

It is a social media web application where user can register/login and send the friend request and messages to other users.
- Technologies Used: Java, MVC Framework, SQLite and HTML5.
- Role: Create Dynamic/static front end pages and built logic functions to create and update post.

Shopping Cart

It is a mobile app where user first login and then add products to the cart. User can also increase or decrease the quantity of products they want to buy and can see their final order before placing it.
- Technologies Used: Android Studio, Android developer tools, Android SDK.
- Role: Design the whole app from scratch and create login and sign-up pages.
- Project link GitHub: [Shopping Cart](#)
